Leading the build

The build order, a way to split the work, and what to catch in reviews.

> AFTER THIS LESSON
> You can split the build across your team and spot changes that break the design.

Build order, and why

- **1. Records and rules-based negotiation in one process.** The core has to work before any AI or sponsor is added.
- **2. Produce profiles and the fair-share calculator.** Every matching rule depends on them.
- **3. Web pages** for households, donors, and food banks.
- **4. Deploy to AWS early,** so n8n and ElevenLabs can call in.
- **5. AGNTCY:** A2A, the Directory, and the cooler-failure scenario.
- **6. LLM negotiators and the assistant,** with calculator tools and number checks.
- **7. n8n, then the ElevenLabs voice line.**
- **8. Evaluation runs,** dashboards, and demo rehearsal.

A way to split the work (suggestion)

- **Person A: protocol and records.** Draft versions, holds, approvals, stop rules, calculators.
- **Person B: agents.** Donor, food bank, and advocate negotiators, rules-based first, then LLM.
- **Person C: households and the web.** Pages, the front-desk assistant, ElevenLabs.
- **Person D: infrastructure and evidence.** AWS, AGNTCY, Beeceptor, n8n, the evaluation runner.

Red flags to catch in review

- **A central decider sneaking in:** anything that commits an organization without that organization's own approval.
- **An auto-commit,** for example "if no answer by 5 pm, assign it to the nearest food bank."

- **An invented number:** a quantity or time coming from model text instead of a calculator.
- **An approval not tied to a version.**
- **Crop names in rules,** such as "if crop == romaine." Use the profile instead.
- **Private data reaching an agent:** anything beyond counts about households.
- **Silent waste:** produce with no recorded pathway.
- **Promising produce that isn't committed yet.**

Writing code still needs your go-ahead, per CLAUDE.md.
